

ACCESSIBLE COMPLIANCE
AND CYBER SECURITY
SERVICES, DELIVERED BY
AMAZING PEOPLE, AT AN
AFFORDABLE PRICE.

VELOCITY CHECK brings more than twenty years of experience in the fields of cyber security fulfilment and assurance, compliance with ISO standards for information security, business continuity and privacy management.

Typically we successfully complete four to six compliance projects per year, not because we lack the capacity to deliver more, but because our consultants are dedicated to one customer at a time.

For us customer satisfaction is key. Our extensive experience, combined with a keen sense of listening and questioning allows us to position our consultants at the intersection between productivity and autonomy. As a result, our deliverables output is gradually increasing while at the same time our customers involvement in the project is steadily decreasing.

Security consulting at work for you

CONNECTING YOUR BUSINESS TO THE RESOURCES YOU NEED

We are not innovators, not in the typical sense of the word. We are however reliable, cost effective and we do understand our trade really well. The majority of very small and small businesses, that we've worked with, run on several constraints such as restricted budgets for non-essentials and DIY practices for basic IT and IT security tasks. At the same time small businesses are innovators, embracing technology much faster than their medium size "counterparts".

Small businesses, in particular, look more for one-stop shops to cover all IT, cyber security and compliance needs, ignoring Sun Tzu's famous Art of War paraphrased quote: "by reinforcing every part, we weaken every part". **At Velocity Check we specialise in three areas. Spearheading all size cyber security compliance programs, managing the entire certification process and securing systems, processes and data.**

SUPPORTED STANDARDS, REGULATIONS AND GUIDELINES

- ISO/IEC 27001:2022
- ISO/IEC 27701:2019
- ISO 22301:2019
- ISO/IEC 20000-1:2018
- PCI DSS v4.0, v3.2.1
- MPA CSP v4.10, v5.0
- IMO MSC-FAL.1/Circ.3
- UK, EU GDPR

equalizing the benefits of compliance and cybersecurity

SECURITY COMPLIANCE

Compliance may be both a requirement such as the General Data Protection Regulation (GDPR) and a business enabler such as the ISO/IEC 27001:2013 international information security standard. At Velocity we are specialising in ensuring our customers businesses comply with cyber security and privacy regulations, international information security standards, contractual security requirements, country specific security best practices and specific security standards for the shipping, film and payment industries.

CERTIFICATION

As an option companies may want to validate their compliance against a security standard. TUV Austria Hellas is Velocity's Check preferred Conformity Assessment Body, accredited by the Hellenic Accreditation System, a Member Organization of MLA signatories IAF/ILAC and EA for performing, inter alia, 3rd party ISO management systems standards certification audits, although we are open to working with Certification Bodies Accredited by the UK Accreditation System i.e., UKAS, or by any other Accreditation System.

VELOCITY CHECK PROVIDES A TOTAL END TO END SOLUTION.

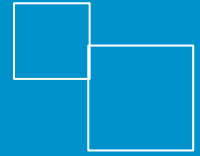

CYBER SECURITY PRACTICE

After many years of applying ourselves as information and cyber security practitioners, we understand that securing systems, processes and data effectively, requires a risk based approach. The problem seems to be which risk model to apply. Qualitative or quantitative risk analysis?

Based on threat scenarios or driven by business impact? There is no consensus among security practitioners and therefore the most "deprecated" evidence in a security audit is the output of the security risk assessment.

Our approach delivers a "security injection at the heart of a company". We analyse the means, opportunity and motives of threat actors and we combine them with real world, categorised, security vulnerabilities to come up with a detailed threat scenario. We then add to our risk formula monetary and reputational business impact values to extract the level of risk. The business impact is "telling" us how to advise you in managing your company's cyber security risk.

SMEs

With tight budgets and limited personnel, small to medium enterprizes cannot afford to waste precious company resources on a security project. At Velocity we can guarantee the timely and cost effective delivery of any project we undertake.

PAYMENT INDUSTRY

The Payment Card Industry Data Security Standard (PCI DSS) is designed to increase controls around cardholder data and to reduce credit card fraud. Velocity's experienced and certified consultants have already supported 140 merchant companies with their compliance requirements.

MARITIME

A large proportion of maritime security breaches is caused by legacy systems and poor processes. Velocity is positioning itself as a strategic partner reducing complexity, ensuring compliance and improving the ship systems cyber security posture.
